

Dr. Techy says,
"AMAZING
progress in
hormonology!"

HORMONES—Time for New Thinking

OLD IDEA	Hormones are made in one gland.
NEW KNOWLEDGE	In addition to glands the brain is known to produce pregnenolone, progesterone, estradiol, DHEA, oxytocin, HCG (the neurohormones).
OLD IDEA	Each hormone has one specific purpose.
NEW KNOWLEDGE	Every hormone has multiple purposes-example-estradiol not only makes endometrium grow but it also grows cartilage.
OLD IDEA	Hormones have no role in pain control.
NEW KNOWLEDGE	Pain control and neuroregeneration depend on neurohormones.

Dr. Hormone says,
"Long-term management of
chronic pain demands an
understanding of hormones."
